Health Benefits

Muscles Used For Skateboarding

Core

Having a strong core is essential to having good balance and effective hip movement. The core provides the strength to stabilize the body and balance it when riding on uneven surfaces

Gluteus Maximus

Your gluteus maximus is a huge muscles in your body that extends from the hips to hamstrings. The glutes are frequently used when transitioning from the crouched to upright position and when propelling forward on flat surfaces

Quadriceps

Your quads are heavily worked when performing movements that involve extending your knee, like accelerating and ollies

Calves

Your calf muscles play a big role in shifting weight to the front or back of your body, which helps turn the skateboard in different directions

Climate Benefits
